

A sock puppet that makes you defend your thinking.

THE PROBLEM

Students now get fluent AI answers instantly — and accept them without question.

Interrogating a confident answer is the skill that matters, nobody drills it, and teachers can't see it in a finished assignment.

RECALL

“Where's the green flag block?”

ANALYZE

“Can I nest an if-then inside a loop to end the game when the timer hits zero?”

SOCKRATES

turn 1 of 4

READ THIS

Towns that sell more ice cream also report more drownings. Sales rose 18% last July, and drownings rose with them.

NOW ASK SOMETHING

What would you ask about this?

select a sentence to anchor it

Ask

sock puppet hero shot

Read something flawed. Question it. Get graded on the questions.

1

Anchor a question

“Do Phones Hurt Test Scores?”
— a grade-6 article with a planted trap. Click a sentence, a region of the chart, or a timestamp; all three resolve to one excerpt.

`correlation ≠ cause`

2

The sock pushes back

It answers with a question, never a verdict. Three turns minimum, five hard-stopped. Hints dock the score, not the turn count.

3

The report card

Five rubric dimensions on Bloom's ladder, each score citing a verbatim student quote.

Bloom level: Analyze

FRONTEND

Content, then a chat box

One passage on screen, one prompt to ask something. Students can anchor a question to the part they mean.

API

Runs the 3–5 turn loop

Holds the transcript, decides when the exchange is done, then hands the whole chain to the evaluator.

MODEL

Two jobs, one rubric

Write the follow-up that deepens the last answer; score each question against Bloom's — relative to the source, never in isolation.

DATA

Transcripts and scores

Every exchange is kept with its score and rationale — the raw material for the report card and, later, growth over time.

REPORT CARD

4 of 6

Analyze

remember

create	

“It never mentions temperature, so the claim isn't supported.”

→ named an unstated confound

You tested the claim instead of restating it. Next ask what evidence would settle

The scoring layer is the reusable core — the surface in front of it is interchangeable.

What comes after the demo

Four bets, in the order we'd take them.

01 Trust the score

Report variance across runs, and check the adversarial case: does a well-written weak argument outscore a scruffy strong one?

03 Teacher in the loop

Read a transcript and override or annotate the score. A class view of the weakest rubric dimension, and a flag for disengagement — three one-word questions — versus genuine struggle.

02 Growth over time

The missing product thesis. Every session is an island today, so nobody can answer “is this student getting better at thinking?”

04 Student agency

Predict your own score before it's revealed — the gap is itself a signal. Bring your own article, a headline or a TikTok caption. Show the rubric with the student's own quotes mapped to it, so the report card teaches rather than judges.
